

Project completed – Refit of high voltage electricity transmission towers in your area

Ref: A2666690

February 2017

Dear resident,

I am pleased to advise that activities associated with Powerlink Queensland's Runcorn to Belmont Transmission Line Refit Project are now complete. I would like to thank you for your ongoing understanding and cooperation during these important works.

Our commitment to minimising potential impacts

As with all of our activities, Powerlink is committed to safely managing impacts associated with works we undertake. All refit activities for this project were completed in accordance with rigorous environmental management requirements, which outlined how potential environmental and social impacts were minimised and managed. We also endeavoured to provide regular updates to the wider community to ensure local residents and stakeholders were aware of our project activities.

We invite your feedback on project delivery

As a nearby resident impacted by this project, we value your feedback and insights on how these works were undertaken. I invite you to complete the attached Project Completion Survey and return to us in the reply paid envelope provided. Your views are very important to us and will help with Powerlink's future decision-making and project planning activities.

Regular maintenance to ensure network reliability

With the completion of project activities, our focus now returns to effectively maintaining the transmission line and easement. This is a key part of Powerlink's commitment to providing a safe and reliable supply of high voltage electricity. Maintenance activities are generally cyclical and at all times we will aim to conduct this work with as little disruption as possible to nearby property owners.

Further information

If you have any questions about the completed project or if you would like more information about our normal routine maintenance activities, please contact me on the details listed below. Alternatively, please visit our website at www.powerlink.com.au.
