

Refit works on Powerlink's network

Outline

We undertake important refit works on transmission lines to continue to provide a safe and reliable power supply to the community.

One of our team contacts affected landholders to discuss access and other considerations and provide detailed information about the scope and timing of the works.

Overview of works

The important refit works may include:

- tower foundation strengthening works
- checking and replacing steelwork and bolts
- reinstalling or upgrading earthing systems
- surface preparation and painting of towers
- replacing insulators or other transmission line hardware
- minor stringing works such as earthwire replacements.

All access to a property will be undertaken in accordance with Powerlink's *Land Access Protocol (LAP)* and any property specific access requirements you may have.

The LAP is available at www.powerlink.com.au

Minimising potential impacts

We are committed to safely managing any potential impacts associated with our refit works. At all times, we aim to conduct our activities with as little disruption as possible to landholders and the wider community.

All refit activities will be undertaken in accordance with rigorous environmental management requirements, which outline how potential environmental and social impacts will be minimised and managed.

As part of our community engagement we provide updates to the broader community around the refit works to ensure we deliver positive outcomes for all.

Powerlink continue to look for innovative ways to improve processes and maintain our transmission network. Our aim is to minimise disruption to the community while maintaining our commitment to safety and environmental management at all times.
