

Update #5: Construction works at Ashgrove West Substation

January 2020

Dear resident,

Following our letter in December 2019, this is an update from Powerlink Queensland on our Ashgrove West Substation replacement project. Construction works at the substation on Trinder Road at Ashgrove West started in May 2018 and are expected to continue **until October 2020**.

The project involves removing ageing substation equipment and installing new equipment within the existing site. All construction activities taking place are on Powerlink-owned land – no expansion of the existing site is required. **These activities will not result in any planned outages to your electricity supply.**

Upcoming temporary closure of Trinder Road in January 2020

As part of our work to replace at the substation, we need to receive an on-site delivery of large specialised equipment critical to the project, requiring a short closure of Trinder Road. This activity will be conducted in accordance with a comprehensive traffic management plan, to ensure the large delivery can occur safely and efficiently.

We currently expect this delivery, and associated temporary road closure, to occur on Monday 20 January 2020 between 9am and 10am.

To minimise any inconvenience to our neighbours and local motorists, our crews are committed to completing this work on schedule. However, please note there is potential for the delivery timing to change at short notice due to weather and other unforeseen circumstances. We will endeavour to contact you as soon as possible should this occur. **We thank you in advance for your patience while this essential delivery takes place.**

Further information

We will continue to keep you informed about project milestones as construction progresses. In the meantime, if you would like more information on this temporary road closure or any other project matters, please visit www.powerlink.com.au or contact:
