Dear Deni,

CleanCo Queensland welcomes the opportunity to propose a non-network solution as part of Powerlink Queensland's Regulatory Investment Test-Transmission (RIT-T) process for Managing Voltages in South-East Queensland.

CleanCo Queensland propose using Wivenhoe Pump/Hydro Power Station (WPS) to provide the non-network solution. The proposal sees WPS operating in either synchronous condenser mode, export mode or import mode to provide reactive power absorption as required. [REDACTED]

I look forward to discussing this opportunity further and to supporting Powerlink in providing a stable network for Queensland.

Should you have any questions please do not hesitate to contact [REDACTED]

Yours sincerely,
