

## Powerlink Ring-fencing Information Register

This register is maintained and made publicly consistent with the Australian Energy Regulator's (AER's) Ring-fencing Guideline Electricity Transmission (Version 4).

Operation of the register is outlined in Powerlink's Information Sharing Protocol, which is also available on our website - <https://www.powerlink.com.au/resources/ring-fencing-information-sharing-protocol>.

The table below lists the Related Electricity Service Providers (RESPs) and other legal entities who have requested access to information identified in clause 4.2.4(a) of the AER's Guideline above. That is, ring-fenced information that a Transmission Network Service Provider (TNSP) shares with a RESP or other legal entity, and a description of the kind of information requested.
